Section 112.664 – Glossary of Terms						
Florida Statute Chapter:	112.664(1)(a) – uses mortality tables used in either of the two most recently published FRS valuation reports, with projection scale for mortality improvement					
	112.664(1)(b) – uses same mortality assumption as 112.664(1)(a) but using an assumed discount rate equal to 200 basis points (2.00%) less than plan's assumed rate of return.					
	Valuation Basis – uses all the assumptions in the plan's valuation as of the current actuarial valuation date.					
Discount Rate:	Rate used to discount the liabilities. Typically the same as assumed rate of return on assets.					
Total Pension Liability:	Actuarial Accrued Liability measured using the appropriate assumptions as specified above and the Traditional Individual Entry Age Normal Cost					
Net Pension Liability:	Total Pension Liability minus Market Value of Plan Assets.					
Years assets sustain benefit payments:	Assuming no future contributions from any source, the number of years the market value of assets will sustain payment of expected retirement benefits. The number of years will vary based on the Florida Statute Chapter assumption.					
Total Dollar Contribution:	Required contribution from all sources (i.e., employee and sponsor). Contribution will vary based on the Florida Statute Chapter assumption.					
Total % of Pay Contribution:	Total Dollar Contribution divided by total payroll of active participants
